PROJECT OVERVIEW

THIS PROJECT ANALYSES THE FIFA PLAYERS DATASET TO IDENTIFY PATTERNS IN PLAYER PERFORMANCE, MARKET VALUE, WAGES, AND TECHNICAL ATTRIBUTES USING DATA VISUALIZATION AND AN INTERACTIVE DASHBOARD.

- FIFA PLAYERS DATASET
- 17,954 PLAYERS
- 51 ATTRIBUTES

PYTHON

PANDAS

STREAMLIT

DATASET & DATA CLEANING

- FILLED VALUE_EURO USING MEDIAN
- FILLED WAGE_EURO USING MEDIAN
- FILLED RELEASE_CLAUSE USING MEDIAN
- LEFT NATIONAL_TEAM FIELDS UNCHANGED BECAUSE MISSING VALUES ARE MEANINGFUL

PLAYERS
17,954

COLUMNS
51

NATIONALITIES 160

DUPLICATE ROWS 0

EXPLORATORY DATA ANALYSIS

The dataset contains players from diverse countries and positions, making it suitable for multidimensional analysis.

4 KPI CARDS:

AVERAGE AGE

AVERAGE RATING

AVERAGE MARKET VALUE

AVERAGE WAGE

ANALYTICAL QUESTIONS

- What influences player market value?
- Does age affect performance?
- Which positions earn the highest wages?
- How does potential relate to player value?
- Which attributes contribute most to player performance?

**TO UNCOVER MEANINGFUL PATTERNS
THAT SUPPORT PLAYER EVALUATION
AND DECISION-MAKING.**

MAJOR INSIGHTS

The analysis revealed several important trends:

- Players with higher overall ratings generally have greater market values.
- High-potential players are considered valuable long-term investments.
- Weekly wages tend to increase with player performance.
- Technical skills such as dribbling, passing, and ball control are strongly associated with elite players.
- Playing position and age also influence a player's market value and salary.

KEY FINDINGS

FEATURES

INTERACTIVE FILTERS FOR PLAYER
EXPLORATION

DYNAMIC PLOTLY VISUALIZATIONS

SUMMARY STATISTICS AND KPIS

CORRELATION ANALYSIS

STREAMLIT DASHBOARD

THE INSIGHTS GENERATED FROM THIS PROJECT CAN SUPPORT:

- Football club recruitment and scouting
- Player performance evaluation
- Market value estimation
- Talent identification and development
- Sports analytics research and decision-making

These analyses help clubs and analysts make more informed decisions using data-driven evidence.

REAL-WORLD APPLICATIONS

CONCLUSION

This project successfully analysed the FIFA Players dataset using data visualization techniques and an interactive dashboard.

The study identified meaningful relationships between player performance, market value, wages, potential, and technical attributes. The combination of Plotly visualizations and Streamlit provides an effective platform for exploring football data and communicating insights clearly.

PERFORMANCE EVALUATION
